

Cash Register Operations Manual

Procedures for store cashiers and supervisors. Version 2.1.

1. Introduction

This manual describes how to open, operate and close a cash register in the store. Read it before your first shift and check it whenever you have a question.

1.1 Scope

It applies to every register in the store, on every shift. It does not cover inventory management or customer complaints, which have their own manuals.

1.2 Responsibilities

The cashier is responsible for the cash and receipts in the register during the shift. The shift supervisor authorizes exceptions, reviews cash counts and signs the closing record.

2. Opening the register

The register is opened at the start of each shift, before serving the first customer.

2.1 Starting float

The supervisor gives the cashier a starting float of 500 dollars in small bills and coins. The cashier counts the float in front of the supervisor and both sign the opening sheet.

2.2 Equipment check

Before opening, the cashier checks that the receipt printer has paper, the barcode scanner works and the card terminal is connected. If any equipment fails, tell the supervisor and use another register.

2.3 Signing in to the system

The cashier signs in to the sales system with a personal code. The code is individual and must not be shared with other employees.

3. Sales

3.1 Recording sales

Each product is recorded with the barcode scanner. If the code cannot be read, the cashier types it in. When finished, tell the customer the total and hand over the printed receipt.

3.2 Payment methods

Cash, debit cards, credit cards and QR code payments are accepted. Card or QR payments are confirmed only when the terminal shows the message “Approved”.

3.3 Cancellations

Only the shift supervisor can authorize a sale cancellation. The cashier records the reason in the system and the supervisor signs the cancellation log. A cancelled sale cannot be reactivated.

4. Cash count and closing

4.1 Partial cash count

Halfway through each shift a partial cash count is done: the cashier counts the cash and compares it with the partial system report, without closing the register.

4.2 Closing the register

At the end of the shift the cashier can no longer record new transactions. To close the register, follow these steps:

1. Print the shift sales report from the system.
2. Count the cash by denomination.
3. Compare the count with the report and record any difference.
4. Sign the closing record and hand it to the supervisor.

Important: the 500 dollar starting float is not part of the shift sales and is returned to the supervisor.

4.3 Differences

If the counted cash does not match the report, the difference is recorded in the closing record. Differences above the tolerance must be reviewed by the supervisor before signing.

Type of difference	Tolerance	Action
Shortage	Up to 10 dollars	Record it
Shortage	Over 10 dollars	Supervisor review
Overage	Any amount	Record and deposit

4.4 Filing the closing record

The signed closing record goes to the supervisor, who files it in that day's folder together with the sales report. Records are kept for one year.

5. Security

5.1 Cash withdrawals

When the cash in the register exceeds 2,000 dollars, the supervisor makes a partial withdrawal and stores it in the safe. The withdrawal is recorded in the system and signed by both.

5.2 Suspicious bills

If a bill looks fake, the cashier does not accept it and politely asks for another payment method. Then the cashier informs the supervisor.

6. Contacts

If the sales system fails, call technical support at extension 204. For security emergencies, tell the shift supervisor immediately.
